

Ratio endpoints give lower and upper GD error curves

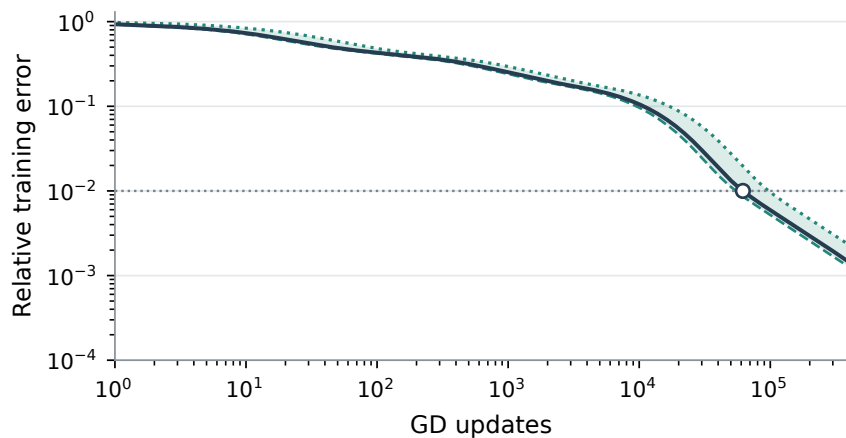

$\gamma = 8$ $13,934,809 \leq \text{steps} \leq 32,778,524$

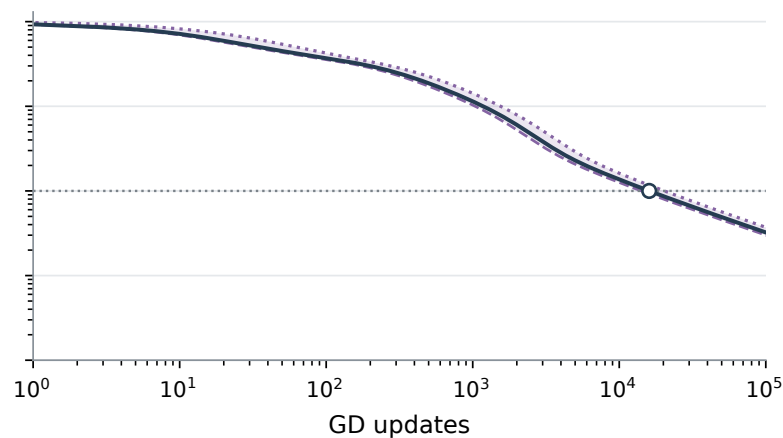

$\gamma = 12$ $163,954 \leq \text{steps} \leq 321,441$

$\gamma = 16$ $54,453 \leq \text{steps} \leq 97,205$

$\gamma = 64$ $14,118 \leq \text{steps} \leq 20,278$

--- Lower error (necessary time)
... Upper error (sufficient time)

— Finite-spectrum error
